wer (wûr; wĕr), *n.* [AS. *wer;* akin to OS. & OHG. *wer*, Goth. *wair*, L. *vir*, Skr. *vira.* Cf. WERGILD, WEREWOLF.] **1.** A man; a husband; a warrior; a vassal. *Obs.* **2.** A man's wergild. *Obs. or Hist.*

were'wolf' (wēr'wo͝olf'; wĕr'-), *n.*; *pl.* -WOLVES (-wo͝olvz'). [AS. *werewulf* for *werwulf; were*, late AS. form for *wer* man + *wulf* a wolf; cf. G. *wärwolf, währwolf, wehrwolf*, a werewolf, MHG. *werwolf.* See WER a man, WOLF; cf. VIRILE, VIRTUE, WORLD.] *Folklore.* A person transformed into a wolf in form and usually in appetite, temporarily or permanently, or a person capable of assuming a wolf's form; a lycanthrope. Belief in werewolves is ancient and widespread, appearing in the literature of many races. The original transtorination is often imposed as a diabolical bewitchment. In other cases the wolf's form is assumed voluntarily, as to gratify a craving for human flesh. One who was a werewolf by choice could in general resume human form at will.

wer'gild' (wûr'gĭld'; wĕr'-), **were'gild'** (wēr'gĭld'; wĕr'-), *n.* [AS. *wergild; wer* a man, value set on a man's life + *gild, gield*, payment of money; akin to G. *wehrgeld.* See WER a man; GELD, *n.*] *Law.* Among the Anglo-Saxons and other Teutonic races, the value set upon a man's life; the fixed price which must be paid by the kindred of a manslayer to the kindred of the slain person by way of composition to avoid the blood feud. In early times for a freeman it was 1,200 Saxon shillings, or £24; for a villein, 200 shillings, or £4; for a serf or slave, 40 pence. A fixed scale of values was established, varying from that of the churl to that of the king. The liability for the wergild fell upon the kindred in the same proportion as they received it, the larger part upon the paternal kindred. Acceptance of the wergild by the kindred, originally optional, later became compulsory, and finally it could not be demanded nor the blood feud waged, the slayer being left to public justice. Similar methods of composition have existed among many primitive peoples. Cf. BOTE, 3; WITE, 1; ERIC; CRO.

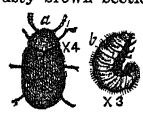
It yields a fine white flour, which is made into bread, cakes, pastry, etc., of all kinds (see FLOUR). Wheat is also largely used coarsely ground, rolled, or crushed. From the hard wheats macaroni, spaghetti, and similar pastes are made. Wheat is highly nutritious; it contains more starch and protein than corn. Flour milled from the whole or nearly whole grain (called *Graham flour,* and *entire-wheat,* or *whole-wheat, flour*) contains about 2 per cent more proteins and 4 per cent less carbohydrates than ordinary flour, from which the husk of the grain is removed; experiments have proved, however, that the latter is the more digestible. The secondary products of milling wheat, as bran, middlings, etc., also inferior grades of flour, are largely used as food for stock.

Wheat. *a* Bald (or Beardless) Wheat; *b* Bearded Wheat.



2. The grass which yields this grain. Common wheat, including all the many varieties cultivated in the great wheat-raising areas of North America, Europe, and Australia, is *Triticum sativum* (see TRITICUM, 1). It is closely related to rye and barley, having a dense 4-sided spike; the flowering glumes may be awned or awnless (bearded or beardless wheats); the grain varies greatly in color. Besides common wheat, two other species (*T. polonicum* and *T. monococcum*) are cultivated. See POLISH WHEAT, ONE-GRAINED. The origin of wheat is unknown, and it no longer occurs in a wild state. It was an important food crop in ancient Egypt and in Palestine, also among the lake dwellers of Switzerland, wheat grains being found commonly in various archæological remains. At the present time the United States exceeds all other countries in the total annual output, but the largest yield of wheat per acre is produced by Great Britain.

wheat rust. A disease of wheat and other grasses caused by the rust fungus *Puccinia graminis;* also, the fungus itself. Throughout the summer it spreads by means of uredospores, which as they develop cause rusty patches on the leaves and stems. Toward fall the fungus produces teliospores which survive the winter; in the following spring they germinate, forming a promycelium with sterigmata from which basidiospores are abstricted; these develop only upon the leaves of the common barberry, on which they produce æcia, or "cluster cups." The spores now arising (æciospores) in turn affect wheat, thus completing the fungal life cycle. The barberry phase in the life cycle is often absent, as in Australia, parts of the United States, etc. See RUST, *n.,* 2 **a**; UREDINALES.

Wheels are used to lessen friction, and hence to diminish tractive force, esp. when supporting a vehicle. USQUEBAUGH.] A distilled alcoholic liquor made from any of various grains, esp. in Scotland, Ireland, and the United States; also, a similar liquor distilled from potatoes. See DISTILLED LIQUORS. In the United States whisky is generally distilled from rye, wheat, or maize. In Scotland and Ireland it is often made from malted barley, and when distilled in the old-fashioned pot stills from malt dried over open fires it has a smoky flavor. New whisky is colorless and raw of taste, but by storing in oak casks becomes mellow, at the same time extracting coloring matter from the wood. The content of alcohol by weight varies from about 40 to 54 per cent. Much liquor sold as whisky is made by compounding strong alcohol with water and flavoring and coloring materials. *Whisky, or spiritus frumenti*, is defined by the United States Pharmacopœia to be: "An alcoholic liquid obtained by the distillation of the mash of fermented grain (usually of mixtures of corn, wheat, and rye), and at least two years old. . . . Its specific gravity should not be more than 0.930 nor less than 0.917, corresponding, approximately, to an alcoholic strength of 44 to 50 per cent by weight, or 50 to 58 per cent by volume." Under the United States pure food and drug acts of 1906 whisky is defined as: "a distillate, at the required alcoholic strength, from the fermented mash of malted cereals, or from malt with unmalted cereals, and containing the congeneric substances formed with ethyl alcohol which are volatile at the ordinary temperature of distillation, and which give the character to the distillate."

Partners score one for each trick they take in excess of six. Partners holding three of the four honors (ace, king, queen, and knave of trumps) score two points; holding four, score four points. Tricks are scored before honors. For this purpose a spiral, or grating, of lead is placed in the upper part of a pot containing the dilute acid, and many of these pots are stacked in fermenting tan bark or manure. After two or three months the lead is largely converted into the compound $2PbCO_3{\cdot}Pb(OH)_2$, which is ground and levigated. The same reactions are carried out more rapidly, but with inferior results, by the **German,** or **chamber, process,** in which acid vapor, steam, and carbon dioxide are supplied to lead plates arranged in a chamber. The **French process** consists in preparing a basic salt of lead (commonly by boiling litharge with lead acetate) and precipitating from it basic carbonate by means of carbon dioxide. There are various other processes, some of them electrolytic. As a pigment white lead combines purity of color with great body, dries quickly, and does not crack; but it is costly, is poisonous, and tends to darken owing to the action of hydrogen sulphide. Syn. — WHO, WHICH, THAT are here compared as relative pronouns. In modern usage WHO refers to persons (less commonly to animals); WHICH, to animals or inanimate objects; THAT may be used of either persons, animals, or things. If a relative clause simply conveys an additional idea, *who* or *which* (preceded by a comma) is usually employed; if the relative clause is explanatory or restrictive, either *who, which*, or *that*, without a preceding comma, is used; as, this gentleman, *who* (not *that*) was here yesterday, desires to see you; the gentleman *who* (or *that*) was here yesterday desires to see you; knock at the first door, *which* you will find open; knock at the first door *that* (or *which*) you find open. In the restrictive use some writers prefer *that*, esp. instead of *which*.

4. In perfect agreement or accord. *Obs. or R.*

Syn. — WHOLE, TOTAL, ENTIRE, COMPLETE, PERFECT, INTACT. WHOLE and TOTAL (except in the sense of "absolute, unqualified;" as, a *total* eclipse, *total* blindness) refer to an object as made up of parts, *whole* implying that none are lacking, *total*, that all are present and taken together as an aggregate; as, a *whole* week, the *whole* creation; "half a share . . . a *whole* one, I" (*Shak.*); the *total* amount, his *total* income from all sources; "These foreign lands . . . constituted the *total* world to a Greek" (*De Quincey*). ENTIRE and COMPLETE do not necessarily imply parts. *Entire* (or in a few phrases, *whole*) describes an object as continuous or unbroken; *complete* refers to it as without deficiency (from the point of view of a given standard), or as having attained the limit of its development; as, an *entire* day, an *entire* specimen; cf., with a *whole* skin; "one *entire* and perfect chrysolite" (*Shak.*); "I . . . have always regretted that you don't give us an *entire* work, and not sprinkle yourself in detached pieces" (*Byron*); "I have the *whole* plan *entire* from beginning to end in my mind" (*Coleridge*); The *Complete* Angler; *complete* combustion, a *complete* revolution of the sun; "the submission of man's nothing-*perfect* to God's all-*complete*" (*R. Browning*). PERFECT, so far as it differs from *complete*, lays greater stress on the possession of consummate excellence, or on freedom from blemish or defect; that is INTACT which is left entire or unimpaired; as, a *perfect* circle, crystal, illustration; "a *perfect* poem like Lycidas, a *perfect* fiction like Esmond, a *perfect* handling of a theory like Newman's Idea of a University" (*W. Pater*); "The group was in wonderful preservation: the figure of Bacchus *intact*, that of the young faun lacking only the arm" (*Vernon Lee*); "That high courage which enabled Fielding . . . to keep his manly benevolence and love of truth *intact*" (*Thackeray*). The same object may be, according to the point of view, at the same time *whole, complete*, and *entire;* as, a *whole* bridge may be shipped in parts, but it is not *entire* so long as the parts are not put together, nor *complete* so long as anything remains to be done. When, however, the last part is in place, the bridge is *whole, entire*, and *complete*. See ALL, SUM, PURE.

"*Will*" . . . is frequently substituted for "volition," as when I say that my hand moves in obedience to my *will.* *Stewart*

b The total conscious process involved in effecting a decision; desire, struggle, and decision viewed as a single mental act.

5. The power of choosing; also, the power of choosing and of acting in accordance with choice; sometimes, in a broader sense, a disposition to act according to certain principles, or to conform, in conduct and thought, to general or ideal ends; as, the moral *will;* the *will* to believe. *Will* is one of the three great divisions into which psychologists usually divide the powers of the mind (the others being *cognition* and *feeling*). Originally its meaning appears to have been desire, or desire, coupled with an ideal object or specific intention; hence, choice. But hardly secondary is the supplementary notion of power or efficiency, or of action leading to realization of desire, which in certain conceptions of free will appears as an inward spontaneity or initiative capable of running counter to all natural motives. The Greek conception of *will* (βούλησις) seems to have been primarily that of willingness, or willing intention; Aristotle uses προαίρησις for free will; with Aristotle it was rational desire, or desire predetermined by reason. However, the use of the term θυμός (soul, breath of life, from a root meaning to rush onward, as the wind) for *will*, conveys the correlative implication of power or initiating force. Plato held that the preëxistent soul chooses its own abode in life, the will being thus predetermined by its own act; in life it is not free, for Plato maintained with Socrates that no one voluntarily chooses evil. But the real basis of the controversy over free will was the Christian doctrine of the fall and redemption of mankind, the question being whether man unaided by divine grace could choose the right. The elements of spontaneous activity and unconstrained choice, thus emphasized, have become salient in the popular understanding of the term, *will* and *free will* being to all intents the same. That the experience denoted by the two terms is the same is evidenced by the use and impressiveness of the appeal to immediate consciousness in proof of the will's freedom. This experience is the object with which modern psychological attempts to define the will are concerned. With the rise of physiological psychology, the question was no longer between free will and theological determinism, or predestination, but between free will and physical determinism, or automatism. In accordance with its parallelistic tendencies, modern psychology (disciples of Wundt) aims to be noncommittal on the question, the *will* being interpreted subjectively, often as a kind of feeling accompanying the activities of motor nerves. In general, in the modern view, the *will* is the mental power or function of acting with conscious design. In its broadest sense, it is equivalent to conation (in which Hamilton distinguished desire from volition). In a narrower sense, it is the mental experience involved in one's own unconstrained activity, especially in bringing to pass a desired end. "Much confusion in theology has arisen from losing sight of the true meaning of the expression 'God's grace,' which properly understood does not efface man's freedom, but, on the contrary, gives freedom or self-activity. 'Free *will*' is therefore the first gift of grace; it creates individuality and freedom from nature, and hence independence and spontaneity. To yield to nature is to reject or oppose grace and resign one's freedom or self-activity. To lose sight of this meaning of grace is to lose sight of the meaning of moral responsibility. Again, to deny freedom on the ground that the will is governed by the strongest motive is to forget that a motive is a product of the intellect, produced by abstracting or thinking away the real and setting up in its place an ideal more desirable. Hence both the volition and the motive itself are the creation of the ego and neither is an external necessity. The ideal which is the essence of the motive does not exist as a real thing until the will realizes it. To say a motive constrains the will is to say that something acts before it exists." *W. T. Harris.*

Appetite is the *will's* solicitor, and the *will* is appetite's controller; what we covet according to the one, by the other we often reject. *Hooker.*

The *will* is plainly that by which the mind chooses anything. *J. Edwards.*

St. Augustine attaches special importance to the idea of *will.* . . . It is the *will* that moves the intellect to action, and it is the element of *will* in the act of faith that makes faith meritorious. Free *will* is the proximate cause of moral evil. *Wm. Turner.*

The proposition that the *will* is free is commonly understood, alike by those who assert and those who deny it, to mean that man has, at least within certain limits, the power of self-determination, of yielding to or resisting motives, — those which arise within him as well as those which plainly have their origin without him, — and of modifying his own character in some degree. *Dict of Bible (Hastings).*

6. A metaphysical reality supposed to resemble, more or less, the human experience of willing. See VOLUNTARISM.

By "*will*" he [Paulsen] does not mean "rational desire," which is its proper meaning, but inapplicable to nature; nor unconscious irrational *will*, which is Schopenhauer's forced meaning; nor unconscious intelligent *will*, which is Hartmann's more correct meaning, though inapplicable to nature. What he does mean by "*will*" is instinct, impulsive feeling, a "will to live," not indeed unconscious, but often subconscious, without idea, without reasoning about ends and means, yet pursuing ends — in short, what he calls, after K. E. von Baer, *Zielstrebigkeit.* *Thos. Case (Encyc. Brit.).*

7. *Law.* The legal declaration of a person's mind as to the manner in which he would have his property or estate disposed of after his death; the written instrument, legally executed, by which a man makes disposition of his estate, to take effect after his death. The term *testament*, originally a Roman and Civil law term, is often now used as synonymous with *will.* In English law the *will* developed from the early post-obit gift, and for a time (about the 12th century) was limited (except in case of burgage tenements) to disposition of chattels (which, in the absence of a will, fell into the hands of the church to administer for the good of the dead man's soul), not primarily to transmit the inheritance, but to provide for the welfare of his soul and for his burial. A will or testament may be *nuncupative* (oral) or *written* (see TESTAMENT, 2). Orig. an oral will might consist of any authenticated declaration by the deceased on his deathbed of his wish as to the disposition of his goods, but now such a will is valid in English law only under exceptional conditions (see NUNCUPATIVE WILL **b**), a written will duly authenticated by witnesses and sealed being in general the only valid form. In England the restriction on the disposition of land by will was temporarily obviated by creating a use, and was largely removed by the Statute of Wills (32 Hen. VIII.) and later by abolition of feudal tenures (by 12 Ch. II.). In the United States in general any form of property may be disposed of by will.

8. *Scots Law.* That part of a summons or other signet letter expressing its will or command, beginning "Our will is."

Syn. — WILL, VOLITION are sometimes interchangeable. But in ordinary usage (for technical distinctions see defs.) WILL commonly denotes the power or faculty of willing or choosing, VOLITION, the exercise of that power, or the act; as, "that iron *will*" (*Tennyson*); "Attention is the first and fundamental thing in *volition*" (*W. James*).

with a will, with willingness and zeal; with all one's heart or strength; earnestly; heartily.

will (wĭl), *v. t.;* WILLED (wĭld); WILL'ING. Indic. present I *will*, thou *willest*, he *wills* or *willeth;* we, ye, they *will.* [Cf. AS. *willian.* See WILL, *n.*] **1.** To wish or long for; to desire. *Archaic.*

5. To give or direct the disposal of by will or testament; to bequeath; devise; as, to *will* one's estate to a son; also, to order or direct by testament; as, he *willed* that his estate should be divided among his children.

[ME. *willen*, pret. *wolde*; AS. *willan*, pres. ind., 1st pers. *wille*, 2d pers. *wilt*, 3d pers. *will(e)*, pret. *wolde;* akin to OS *willian*, OFries. *willa*, D. *willen*, G. *wollen*, OHG. *wollan, wellan*, Icel. & Sw. *vilja*, Dan. *ville*, Goth. *wiljan*, OSlav. *voliti*, L. *velle* to wish, *volo* I wish; cf. Skr. *vṛ* to choose, to prefer. The pres. ind. in E. & AS. is orig. a pret. optative. Cf. VOLUNTARY, WELCOME, WELL, *adv.*] **1.** As *v. t.:* Wish; desire; incline to have; — now chiefly in the form *would* (which see).

2. As *auxil.*, followed by the infinitive without *to* (see also WOULD): **a** Am (is, are, etc.) willing or desirous to, or, emphatically, determined to. Hence, simply, am (is, are, etc.) to; — forming future-tense phrases. See SHALL, 2. **b** Am (is, are, etc.) accustomed to; have a practice or habit to.

They *will* go to Sunday schools, through storms their brothers are afraid of . . . They *will* stand behind a table at a fair all day. *O. W. Holmes.*

☞ Sometimes, esp. in dialect, *will* and its verb are used with the force merely of the simple verb; as in, I 'm thinking this *will* be [is] your birthday.

Syn. — WILL, SHALL are often confused by careless speakers and writers. In the first person, SHALL alone denotes simple futurity; WILL implies willingness, consent, promise, or determination. In the second and third persons, WILL alone (except in questions in the second person, where *shall* is the proper auxiliary) denotes simple futurity, and SHALL implies command, threat, promise, or determination. But in subordinate clauses *shall* is the proper auxiliary for simple futurity in all three persons, when the subject is the same as that of the principal verb. See MAY, OUGHT.

☞ This word has been confused with *will*, *v. t.*, to choose, which, unlike this, is entirely of the weak conjugation.

will I, nill, I, *or* **will ye, nill ye,** *or* **will he, nill he** [see NILL, *v. t.*], whether I, you, or he will it or not; hence, without choice; compulsorily; — sometimes corrupted into *willy-nilly.* "If I must take service *willy-nilly*." *J. H. Newman.*

Wine is essentially a dilute solution of alcohol, to which its stimulating properties are due, together with small quantities of certain ethers and esters, which impart to it the bouquet. The properties of these compounds, in connection with the amounts of sugar, albuminoids, glycerin, carbon dioxide, acid, coloring matter, etc., determine its character. The composition depends upon the grapes used, the climate and soil, and the various details of handling. *Red* wine is made by allowing the juice of dark-colored grapes to ferment in contact with the skins so as to extract their coloring matter; wine made in other ways is yellow or colorless and is termed *white* wine. Wines are further characterized as *dry* or *sweet, still* or *sparkling, heavy* or *light, full* or *thin, rough* or *smooth.* In making the strong wines alcohol is added, since the maximum of alcohol produced by fermentation is not much over 13 per cent. Wine is considerably used in pharmacy as a menstruum and, with a qualifying phrase or word indicating the medicinal substance dissolved, the word (cf. VINUM) appears in the names of many solutions; as, *wine* of opium; orange *wine.* The varieties of wine are very many; their names are derived from the variety of grape, place of manufacture, etc. Wherever possible, varieties have been described and classified under certain types. Among vertebrates the *wing* is always a modified fore limb, corresponding to the arm of a man, and such organs are possessed only by birds, bats, and pterodactyls. The tegumentary expansions of flying lemurs, flying squirrels, and modern flying lizards, or dragons, are *patagia*, or *parachutes*. In flying fishes the large pectoral fins serve as the means of limited flight. In birds the wing surface is formed chiefly of feathers. In bats and pterodactyls it is a membranous skin stretched between the side of the body and one or more of the greatly elongated digits. See BIRD, 2; 4th BAT, PTERODACTYL. In invertebrates true wings are possessed only by insects, which usually have two pairs. They consist of a double chitinous membrane strengthened by numerous tubular veins, and may have one or both surfaces covered with minute overlapping scales. In mythology, art, etc., wings are ascribed to various beings, as angels, cherubim, gods, or dragons. Wings are often symbolical, as of speed, protecting care, or omnipresence.

WIT is more purely intellectual than *humor*, and implies swift perception of the incongruous; it is primarily verbal in its expression, and depends for its effect chiefly on ingenuity or unexpectedness of turn, or patness of application; HUMOR commonly implies broader human sympathies than *wit*, so that its sense of the incongruous is more kindly, and is often blended with pathos; as, "[The] essence [of *wit*] consists in a partial and incomplete view of whatever it touches" (*Holmes*); "Only Shakespeare had that true sense of *humor* which, like the universal solvent sought by the alchemists, so fuses together all the elements of a character (as in Falstaff) that any question of good or evil, of dignified or ridiculous, is silenced by the apprehension of its thorough humanity" (*Lowell*); "His [Chaucer's] *humor* pervades his comic tales like sunshine, and never dazzles the attention by a sudden flash" (*id.*); "*humor* that is touched with cross-lights of pathos" (*De Quincey*); "*Humor* is *wit* appertaining to character, and indulges in breadth of drollery rather than in play and brilliancy of point" (*Landor*). 2. The hard fibrous substance which makes up the greater part of the stems and branches of trees or shrubs beneath the bark and is found to a limited extent in herbaceous plants. The older more central portion of the wood of a tree (*heartwood*, or *duramen*) is often of a different color and texture from that of the younger external layers (*sapwood*, or *alburnum*). cated sheep and some other animals; esp., that of sheep, which constitutes, next to cotton, the most important material of clothing. Wool proper is borne by wild species of sheep only as a short undercoat concealed by hair, and its development in domesticated sheep is due to long-continued selective breeding. It is distinguished from hair by the character of its covering of minute overlapping scales or plates, to which is due its felting property. There are imperceptible gradations between hair and wool, however, and neglected wool-bearing animals tend to produce an increasing amount of hair. Wool, like hair, is an outgrowth of the epidermis and consists essentially of keratin, and in its natural state contains fatty matter called *yolk* or *suint* (which see). Its quality has been greatly improved by careful breeding and crossing of fine-wooled with long-wooled breeds. Wool from different parts of the body differs greatly in length of fiber, fineness, and structure. Wools are variously graded, as on the basis of length of staple, fineness, luster, elasticity, color, etc. The three main classes on the basis of staple are: (1) **carding, or clothing, wools**, or those of the Merino type, in which felting qualities are desired; (2) **combing wools**, in which length of staple is required; and (3) **miscellaneous wools**, long, strong, coarse wools used for carpets, blankets, and coarse clothing, and sometimes called **carpet**, or **blanket, wools**.

9. An articulate sound or combination of sounds which, as symbolizing an idea, is taken as an ultimate independent unit of discourse; the smallest particle of speech that has meaning when taken by itself. Thus the combination of vocables, *clouds disappear*, though expressing a logical unit (a judgment), is not an ultimate sense unit, since it is analyzable into two independent terms; while the *-s* of *clouds* and the *dis-* of *disappear*, though ultimate sense units, are not independent units, since they have their sense only in combination; and the phonetic units (syllables) *-ap* and *-pear* are not units of sense at all; hence *clouds* and *disappear* are the only units here that have all the characteristics of *words*. A word may be: as to its origin, **radical** (as *cloud*, *run*, *white*), or **derivative** (as *cloudy*, *cloudiness*); as to its form, **inflectional** (as *clouds*, *walked*), and either **simple** or **compound**, as *man*, *manservant*. Words are **presentational** when they present ideas as terms of thought (as *cloud*, *run*, *white*), and **relational** when they express the relationships between the terms of thought (as *of*, *shall*, *to*). In an inflected language those forms of a given base which constitute a particular part of speech (noun, verb, etc.) are regarded not as different *words*, but as forms of the same *word*, which in this case is a grammatical abstraction by which the idea denoted in common by these forms is conceived apart from any context, although in actual speech no word form for the idea so conceived may exist; thus, *mans*, *manning*, *manned* are regarded as forms of the verb *man*; *man's*, *men*, *men's* as forms of another *word*, the noun *man*. So, in Latin, *hominis*, *hominem*, etc., are viewed as forms of the same *word*, although their base *homin-* does not exist as a *word*.

Amongst men who confound their ideas with *words*, there must be endless disputes *Locke.*

wres'tling (-lĭng), *n.* Act of one who wrestles; specif., the sport consisting of the hand-to-hand combat between two unarmed contestants who seek to throw each other. The various styles of wrestling differ in their definition of a fall and in the governing rules. In **Greco-Roman wrestling**, tripping and taking hold of the legs are forbidden, and a fall is gained (that is, the bout is won) by the contestant who pins both his opponent's shoulders to the ground. In **catch-as-catch-can wrestling**, all holds are permitted except such as may be barred by mutual consent, and a fall is defined as in Greco-Roman style For description of the holds or chips, etc., used in these styles, see FULL NELSON; HALF NELSON; HAMMER LOCK; SCISSORS, 2; HEAD SPIN; BRIDGE, 5 n. **Lancashire style wrestling** is essentially the same as *catch-as-catch-can.* In **Cumberland and Westmorland wrestling** the contestants stand chest to chest, grasping each other around the body. The one first losing his hold, or touching the ground with any part of his body except his feet, loses the bout. If both fall to the ground at the same time, it is a *dogfall*, and must be wrestled over. In the **Cornwall and Devon wrestling**, the wrestlers compete in strong loose linen jackets, catching hold of the jacket, or anywhere above the waist. Two shoulders and one hip, or two hips and one shoulder, must touch the ground to constitute a fall, and if a man is thrown otherwise than on his back the contestants get upon their feet and the bout recommences. 2. *Law.* Orig., in English law, any of various instruments in epistolary form issued under seal in the king's name, being either an **original writ** (one issued under the great seal to institute an action) or a **judicial writ** (one issued by a court under its own seal for summoning juries, coercing litigants, enforcing judgments, etc.); hence, in general, an order or mandatory process in writing, under seal, issued, in the name of the sovereign or in the name of a court or judicial officer, from the proper authority, commanding the performance or nonperformance of some act by the person to whom it is directed. Under various penal codes in the United States a *writ* is defined as "any order or precept in writing issued in the name of the State or of a court or judicial officer." The *original writ* of English law contained a short statement of the facts complained of, and directed the sheriff to command the defendant to satisfy the plaintiff's claim or to appear and answer his complaint in court. The circumstances under which a writ would be issued became fixed, and this limited the nature of actions by which relief could be obtained, since no action could be begun in the king's court, and no action affecting freehold could be begun anywhere, except by an original writ. To remedy this the Statute of Westminster II. enacted that existing writs should issue for injuries or wrongs of a similar nature (L., *in consimili casu*) to those expressly provided for in existing writs. This gave rise to the system of fictious which became characteristic of common-law pleading, in both English and American practice. The only important writs developed after the reign of Henry III. were that of trespass and its offshoots, ejectment, case, assumpsit, and trover, all being framed under statutory authority. The use of original writs is now discontinued, but the statutory summons, sometimes called **writ of summons**, by which actions are now begun in practically all jurisdictions, is sometimes erroneously called an **original writ.** *Writs* are usually witnessed, or **tested**, in the name of the chief justice or principal judge of the court out of which they are issued; and those directed to a sheriff, or other ministerial officer, require him to *return* them on a day specified. Writs are variously named; as: the **writ of account, writ of aiel, writ of covenant, writ of detinue**, etc., from the action in which they were used (see ACCOUNT, *n.*, 7; AIEL, 2; COVENANT, *n.*, 5 **b**; DETINUE **b**, etc.); the **writ of dower, writ of entry, writ of possession**, etc., from the right to enforce which they are used; the **writ of execution, writ of inhibition**, etc., from the nature of the command contained in them; the **writ of speliation**, from the wrong it aims to redress, etc.

writ by progress. See PROGRESS, *n.*, 4. — **w. of consultation,** *Law*, a writ by which a cause, improperly removed by prohibition from one court to another, is returned to the court from which it came; — so called because the judges, on *consultation*, find the prohibition ill-founded. — **w. of cosinage.** See COSINAGE. — **w. of error,** *Law*, a writ, orig. in English law an original writ, which lies in a competent court after judgment in an action at law in a court of record, directing the latter to examine the record, or, more commonly, to remit the record to an appellate court in order that some alleged error in the proceedings or in the judgment of the court may be corrected, if it exists. Appeal has now generally superseded the proceeding by writ of error. — **w. of extent.** See EXTENT, 3. — **w. of inquiry,** a writ issued in certain actions at law, where the defendant has suffered judg-

In 1802 the territory was ceded to the United States. The claims of the purchasers, whom Georgia had refused to compensate, were sustained by the United States Supreme Court, which (1810) declared the repealing act of 1796 unconstitutional. The **fictitious year** is the interval between two successive returns of the sun's center to *mean longitude* 280° (used in reducing star places). The *lunar year* is a period of 12 lunar months. The *lunar astronomical year*, of 12 lunar synodical months, has a length of 354 days, 8 hours, 48 minutes, 34 seconds. The *common lunar year* consists of 12 lunar civil months, or about 354½ days. Formerly, in England, the legal year began on Annunciation Day, March 25; the change to January 1 took place on that day in 1752; in Scotland such a change had been made in 1600. Hence, dates between January 1 and March 25 are sometimes written thus: February 21, 1574-5, that is, 1575 according to present reckoning. In statutes a year means a calendar year, unless a contrary intention is expressed. At the common law and as defined in some codes a **half year** consists of 182 days; a **quarter of a year**, of 91 days. The lunar year of 354 days, divided into 12 months, is the regular common Hebrew year and was the ancient Greek year, intercalation being resorted to to maintain some correspondence between the lunar and solar years. Ygg'dra-sill (Ig'drȧ-sĭl), *n.* [Icel.] *Norse Myth.* The great tree which supports the universe; — in the "Grimnismal" called *Askr Yggdrasills* (Yggdrasill's ash), *Yggdrasill* being probably a name for the wind. The same poem describes the tree as having three roots, Hel dwelling under one (cf. NIFLHEIM), the frost giants under another (cf. JOTUNNHEIM), and mankind under the third (cf. MIDGARD). A wise eagle sits at the top; the roots are gnawed by Nithhogg and other serpents; harts bite the foliage, and the squirrel **Ratatosk** carries words of strife up and down. Other poems give varying accounts regarding Yggdrasill, on the basis of which Viktor Rydberg reconstructs it as follows: The northern root stands over the reservoir Hvergelmir and over Niflhel, inhabited by the frost giants, where are the nine regions of punishment, including Nastrond. The second, or central, root overspreads the region of Mimir's fountain; the third, or southern, root is over Urth's fountain and the subterranean assembly place of the gods, connected by Bifrost with Asgard. The quaking of Yggdrasill releases the monsters that are confined in the lower regions for the conflict of Ragnarok. Yggdrasill, as the world tree, is generally considered to be a late addition to Norse mythology. Cf. NINE WORLDS, NORN, YMIR.

The modern yoke for oxen is usually a piece of timber hollowed, or made curving, near each end, and laid on the necks of the oxen, being secured in place by two bows, one inclosing each neck, and fastened through the timber. In some countries the yoke consists of a flat piece of wood fastened to the foreheads of the oxen by thongs about the horns. Connection with the load is by a chain or rope from a hook or ring in the middle of the yoke.

The protoplasmic material is distinguished as *formative yolk*, the inert nutritive material, usually present, as *food yolk*, or *nutritive yolk*. Often, in exact usage, *yolk* is restricted to the nutritive material only, the food yolk. In the egg of a bird the formative yolk occupies a small area (the *cicatricle*) at one side of a relatively enormous mass of food yolk. The latter, which serves only as nutriment for the embryo, consists of a central flask-shaped mass and numerous thin concentric layers of light yellow **white yolk**, alternating with thicker layers of darker **yellow yolk**. See EGG, *Illust.* In the ova of other animals the food yolk, when present, may be distributed uniformly through the protoplasm (*alecithal ova*) or more or less concentrated toward one pole (*telolecithal ova*) or accumulated at the center of the cell (*centrolecithal ova*). about 1830. They advocated the principles of democracy, socialism, and rationalism, the separation of church and state, and the raising of the social and political position of woman. Among their leading exponents were Gutzkaw, Heine, Laube, Kühne, Mundt, and Wienborg. The organization of Young Germany was broken up after the failure of the revolutionists of 1848-49. — **Young Guard.** See OLD GUARD **a.** — **y. hyson.** See HYSON. — **Y. Ireland,** a party of Irish agitators arising during the efforts of O'Connell after 1841 for the repeal of the Act of Union, and differing from him in their advocacy of seeking political reform and separation from England by physical force. To this end the Young Irelanders attempted to bring together both Protestants and Roman Catholics. Alarmed by the party's activity in 1848, the British government arrested and deported some of the leaders, soon after which the movement ended. — **Y. Italy** [It. *La Giovane Italia*], an association of Italians organized in 1831 by Mazzini to deliver the Italian peninsula from Austrian domination and to unite it under a republican form of government. Unlike the Carbonari (see CARBONARO), it sought to attain its purposes by agitation and open insurrection rather than by conspiracy. Although short-lived and failing to promote a revolution, it served to quicken the spirit of Italian patriotism and to facilitate the subsequent success of Victor Emmanuel and Cavour. Societies in other countries were formed with Young Italy as a model. — **y. laird,** the eldest son and heir of a "laird." *Scot.* — **y. man,** a beau, or suitor. *Uncultivated.* — **Y. Men's Christian Association,** an organization for promoting the spiritual, intellectual, social, and physical welfare of young men, founded, June 6, 1844, by George Williams (knighted therefor by Queen Victoria) in London. In 1851 it extended to the United States and Canada, and in 1855 representatives of similar organizations throughout Europe and America formed an international body. The movement has successfully expanded not only among young men in general, but also specifically among railroad men, in the army and navy, with provision for Indians and negroes, and a full duplication of all the various lines of operation in the boys' departments. — **Y. Norway,** a peasant radical party arising in Norway about 1833 and championed by Henrik Wergeland. — **y. one,** a young human being; a child; also, a young animal, as a colt. — **Y. People's Society of Christian Endeavor** *or* **Endeavour.** See under CHRISTIAN. — **Y. Poland.** See YOUNG EUROPE. — **Y. Pretender,** Charles Edward Stuart (1720-88), the Young Adventurer, the Young Chevalier, affectionately called Prince Charlie, who nominally led the adventurous insurrection of 1745 in England. He was son of James, the old Pretender and Chevalier St. George. — **Y. Ros'ci-us,** the (rŏs'ĭ-ŭs), William Henry West Betty (1791-1874), who acquired fame and fortune as a boy actor. — **Y. Switzerland,** a political organization formed soon after Young Europe (which see) for the purpose of bringing about an Alpine confederation, including Switzerland, Tirol, Savoy, and the rest of the Alpine chain. — **Y. Turkey,** a party of Turks, reorganized, at Geneva, in 1891 to effect radical political and social reforms in the Ottoman Empire. The Young Turks were ruthlessly treated as rebels by the government, notably in the spring of 1901, but in 1908 they brought about a bloodless revolution, compelling the despotic Sultan Abdul-Hamid II. to proclaim a constitution guaranteeing freedom of speech, of the press, and right of assembly and forcing him to convoke a parliament. The sultan's actions in alleged violation of the constitution, together with a mutiny in his favor of certain troops, resulted in 1909 in his deposition by the Young Turks, who controlled the army, and in the elevation of his brother Mohammed Reshad Effendi to the throne as Mehmed V. — **Y. Women's Christian Association,** an organization for promoting the spiritual, intellectual, social, and economic welfare of young women, originating in 1855 with Lady Kinnaird's home for young women, and Miss Emma Roberts's prayer union for young women, in England, which were combined in the year 1884 as a national association. Now nearly all the civilized countries, and esp. the United States, have local, national, and international organizations.

Zeus (zūs), *n.* [Gr Ζεύς.] *Gr. Relig.* The chief of the Olympian gods, "father of gods and men ;" — identified by the Romans with *Jupiter.*

Zeus, with Attributes : Nike and Crown, Thunderbolt, and Eagle.

(1) The most primitive character of Zeus is probably as god of the elements, as rain, wind, thunder, and lightning ; the thunderbolt is his sign, the rainbow, *Iris,* his messenger. He is especially connected with lofty mountains and has his seat upon Olympus, whence he is Zeus **O-lym'pi-us** (ō-lĭm'pĭ-ŭs). (2) He is also giver of victory in war and in athletic contests, whence the *ægis* is his attribute and *Nike* (victory) his attendant. Hence he is called "Ægis-bearing," "Victory-bringing," and Zeus **So'ter** (sō'tẽr), "Zeus, the Savior." The great *Olympian* and *Nemean* festivals were held in his honor. (3) Further, Zeus is the god of moral law and order, protector of suppliants and punisher of guilt. He is here the consort of *Themis* and the source of divine decrees, speaking through oracles, of which that at Dodona was preëminent. (4) He is also god of social virtues : of friendship, Zeus **Phi'li-os** (fĭl'ĭ-ŏs) ; of hospitality, Zeus **Xe'ni-os** (zē'nĭ-ŏs) ; and, in a broader sense, of family and kindred ties, Zeus **Her-ke'ios** (hẽr-kē'yŏs ; -kī'ŏs), Zeus **Kte'si-os** (k'tē'sĭ-ŏs), Zeus **Te-le'ios** (tē-lē'yŏs ; -lī'ŏs). (5) As a political deity, he is the head of the clan or phratry, Zeus **Phra'tri-os** (frā'trĭ-ŏs) ; of the state, Zeus **Ba'si-leus'** (bā'sĭ-lūs') and Zeus **Po'li-eus'** (pō'lĭ-ūs') (cf. DIPOLIA) ; of council, Zeus **Bou-la'ios** (bōō-lā'yŏs ; -lī'ŏs) ; of assemblies and trials, Zeus **A'go-ra'ios** (ăg'ō-rā'yŏs ; -rī'ŏs) ; of good faith, Zeus **Pis'ti-os** (pĭs'tĭ-ŏs) (cf. FIDES). (6) As the supreme deity of the whole Hellenic race, of Greece as a nation, he is called Zeus **Hel-le'ni-os** (hĕ-lĕ'nĭ-ŏs), and, in commemoration of the victory which preserved the race from Persian subjugation, Zeus **E'leu-the'ri-os** (ĕl'ū-thē'rĭ-ŏs) (cf. ELEUTHERIA). (7) He was also regarded in some aspects as a chthonian, or underworld, god, and was hence called Zeus **Ha'des** (hā'dēz) and Zeus **Mei-li'chi-os** (mī-lĭk'ĭ-ŏs) (probably a euphemism ; cf. DIASIA). (8) Finally, in later Greek thought, and esp. in Orphic mysticism, Zeus was viewed as a supreme, perhaps pantheistic, deity, the beginning and end of all things.

Zeus was regarded by the Greeks as a god of the Hellenic race, the original seat of whose worship was Thessaly. The myths of his overthrowing *Cronus* and of his conquests of the *Titans* and *Gimts* have been interpreted as legendary accounts of his replacing of earlier deities, while many of his cult epithets indicate amalgamation with older local deities (as Zeus **Ly-ce'us** (lī-sē'yŭs), worshiped in the Peloponnesus probably with human sacrifice). Zeus is represented as the son of *Cronus* and *Rhea* and as the consort, generally, of *Hera,* by whom he was father of Ares, Hebe, and Hephæstus ; though also of *Leto,* who bore to him Apollo and Artemis ; of *Demeter,* who bore Persephone ; of *Dione,* who bore Aphrodite ; of *Maia,* who bore Hermes ; of *Semele,* who bore Dionysus, of *Alcmene,* mother of Hercules, *Mnemosyne,* mother of the Muses, and *Eurymome,* mother of the Charites. See JUPITER, etc.

Zeus was regarded by the Greeks as a god of the Hellenic race, the original seat of whose worship was Thessaly. The myths of his overthrowing *Cronus* and of his conquests of the *Titans* and *Gimts* have been interpreted as legendary accounts of his replacing of earlier deities, while many of his cult epithets indicate amalgamation with older local deities (as Zeus **Ly-ce'us** (lī-sē'yŭs), worshiped in the Peloponnesus probably with human sacrifice). Zeus is represented as the son of *Cronus* and *Rhea* and as the consort, generally, of *Hera,* by whom he was father of Ares, Hebe, and Hephæstus ; though also of *Leto,* who bore to him Apollo and Artemis ; of *Demeter,* who bore Persephone ; of *Dione,* who bore Aphrodite ; of *Maia,* who bore Hermes ; of *Semele,* who bore Dionysus, of *Alcmene,* mother of Hercules, *Mnemosyne,* mother of the Muses, and *Eurymome,* mother of the Charites. zinc (zĭŋk), *n.* [G. *zink*, prob. akin to *zinn* tin: cf. F. *zinc*, fr. G. Cf. TIN.] **1.** *Chem.* A bluish white crystalline metallic element, brittle when cold, malleable at 120–150° C. (250–300° F.), and very brittle at 200° C. It is practically unaffected by air and moisture at ordinary temperatures. Symbol, *Zn*; at. wt., 65.37. Zinc occurs in considerable abundance, but probably never in the native state. Its chief ores are sphalerite or blende, smithsonite, and calamine. In New Jersey willemite and zincite are ores of zinc, and franklinite is used for making zinc white. The metal is obtained by heating an intimate mixture of ore and carbon (blende must first be roasted; smithsonite and calamine are often first calcined). In the **Belgian process** the mixture is heated in a large number of tubular or cylindrical clay retorts placed in a gently sloping position in a furnace (**Belgian furnace**); in the **Silesian process** the distilling vessels are larger and muffle-shaped, and the furnace (**Silesian furnace**) is heated to a higher temperature. The zinc vapors at first condense to a bluish powder known as **zinc dust**, which contains several per cent of oxide, and which finds limited use as a reducing agent. The remainder of the zinc collects as a liquid and is cast into ingots. Zinc melts at 420° C. (788° F.). At about 930° C. it boils, yielding vapors which burn in air, forming the oxide. Sp. gr. of zinc, 7–7.2. Weight of a cubic foot, 437–450 lbs. Commercial zinc, or pure zinc in contact with another metal, dissolves readily in dilute acids. Zinc is used to make roofing, sheathing, etc., to coat iron (see GALVANIZED IRON), to make alloys, as brass, and in voltaic cells. Zinc has a valence of two, and has acid properties as well as basic ones. See ZINCATE. Its salts are poisonous.

F. *zoologie.* See ZODIAC.] **1.** The science of animals; that division (coördinate with botany) of biology which deals with the animal kingdom. See ANIMAL, *n.*, 1. Zoölogy has as its main divisions **comparative anatomy, comparative physiology, zoögeography, paleozoölogy, cytology, embryology, taxonomy, economic zoölogy, etiology,** and various other sciences in whole or in part, and there are numerous minor divisions dealing with particular groups of animals, as **conchology, carcinology, entomology, ichthyology, herpetology, ornithology,** and **mammalogy.** As a science zoölogy dates from Aristotle (384–322 B. C.), who proposed a rough classification of animals. The science made no advance until the 16th century, when it was revived principally through the work of Vesalius and Gesner. In the 17th century Harvey's study of the circulation of the blood, Malpighi's discoveries with the microscope, and John Ray's limitation of the term *species* were the most noteworthy steps of progress. In the 18th century Linnæus established the binomial system of nomenclature (see NOMENCLATURE), and recognized groups higher than species. Early in the 19th century Cuvier worked along the lines of comparative anatomy and paleontology and Lamarck enunciated his theory of evolution (see LAMARCKISM). The discovery of the animal cell by Schwann and important embryological work by von Baer and Kölliker belong to this period. In 1856 Charles Darwin published his theory of evolution by natural selection (see DARWINISM). He was ably supported by Wallace, Huxley, Spencer, Haeckel, Weismann, and many others until the old idea of the fixity of species was abandoned and zoölogy took on its modern aspect, in which classification has become the expression of phylogeny and the investigation of evolutionary theories and questions of heredity have been placed on an experimental basis.

WEBSTER'S NEW INTERNATIONAL DICTIONARY.

INTRODUCTION.

In the two following vocabularies the most difficult questions to determine have been those relating to spelling and pronunciation; and, as in both vocabularies the same principles are involved, it has seemed best to mention them here in one general statement.

Until within a few years the spelling of proper names, particularly those in geography, was very unsystematic. Each writer apparently chose the form that seemed to him good, irrespective of what others had done before him or of any consistency even in his own work. Added to this was the confusion resulting from the fact that much geographical information originally came into English from foreign sources through the explorations of German, French, or other foreign travelers. The spelling of native names by these authors was frequently adopted by English translators and geographical writers without realization of the fact that the letters of a German spelling, for instance, would, when spoken with their usual English values, give a very different pronunciation from that originally intended, and would very inadequately represent the native name to the English reader. Then, too, while one English writer would take his spelling from a German authority, another in describing the same place would adopt a French spelling, while a third would apparently make a combination of the two. To overcome these serious difficulties the Royal Geographical Society of England some years ago formulated a set of rules to govern geographic spellings. Similar rules were adopted a little later by the United States Geographic Board and still more recently by the Geographic Board of Canada. The rules of these various geographical bodies have formed the basis for the spellings in this Gazetteer.

Names pertaining to India follow the spelling of Hunter's "Gazetteer of India," the authority accepted by the Royal Geographical Society.

For names in the United States and Canada the specific decisions of the respective geographic boards have been followed. There are, however, hundreds of questionable cases on which no definite decision has as yet been given, and in order that such cases might be settled in accordance with the policy of the United States Geographic Board they have been referred for decision to Mr. Henry Gannett, Geographer of the United States Geological Survey, and Chairman of the United States Geographic Board. He has also given his aid in determining the spelling of a large number of Oriental names.

In European names the best local spelling as shown by official census returns and government maps has been sought, due attention being paid to those cases in which a more or less Anglicized form has become fixed in English usage. Since in French, German, Scandinavian, Spanish, Portuguese, Hungarian, Roumanian, and the Slavic languages using the Roman alphabet, certain diacritical marks and accents form an integral part of the spelling, such marks have been given in this Gazetteer.

In countries where there has been a frequent change in the ruling race or where, as in Poland, a strong national feeling has kept alive the national language under an alien rule, two or more names or forms of the same name are frequently in current use. In such cases the aim has been to give usually the local name first, with such alternative forms as seemed desirable, inserting cross references from the more important alternatives to the full entry. Thus most Polish names are given under the Polish forms, though names of the Russian administrative divisions in Poland are given under their Russian forms, the Polish equivalents being placed second. Many names, however, have been introduced into English and become settled by usage in other forms than those of the local language. Thus many Hungarian and Bohemian towns are usually known in English by their German names. In such cases the best known name rather than the local one has been given the place of preference.

In the work on the Biographical Dictionary there has been a careful comparison of many authorities. Where authorities differ particular care has been taken to learn the facts or most recent opinions. For British names the "Dictionary of National Biography" has usually been followed.

For names in countries using the Greek alphabet or its modified form, the Cyrillic, as in Russia, Servia, Bulgaria, and some other Slavic countries, a system of transliteration has been used by which each letter of the Greek or Cyrillic alphabet is always replaced by the same letter of the Roman alphabet. This is a method which has for some time been followed by German geographers, and is in use by some of the leading geographical publications of Great Britain. The spelling of Russian names in English has been inconsistent to the last degree, and it is hoped that the effort which has been made to spell systematically such of these names as occur in this Gazetteer and Biographical Dictionary may aid in establishing a more uniform English usage.

In pronunciation the aim has been to give as nearly as possible the best local usage of each country, except in the case of certain well-known names like Paris, Naples, Milan, etc., that have an accepted English pronunciation and have often acquired an English form of spelling. For such names the English pronunciation is given, but the foreign spelling and pronunciation have usually been added

The ascertaining of pronunciations has been a difficult task. Information has been sought not only in authoritative books, both English and foreign, but also by direct inquiries from educated natives and by correspondence with persons in the particular locality the pronunciation of whose name was desired. It is hoped that the result will be found equal to the effort expended. It is realized, however, that many times only an approximate result has been attained, since it is necessary to describe the phonetic symbols used by referring them to English sounds, and often the foreign sounds are about midway between the sounds most nearly equivalent to them in English. In such cases it is often a question of nice judgment to determine the proper symbol to be used, and what seems right to one ear will seem an error to another.

The difficult work of transliterating from the Russian was intrusted to Mr. Leo Wiener, Professor of the Slavic languages at Harvard University. He is also responsible for the spelling and pronunciation of all the Slavic names in both the Biographical and Geographical vocabularies, and has given much assistance in determining the spelling and pronunciation of many of the names pertaining to Turkey, Greece, Sweden, Norway, Denmark, and the Netherlands.

The work in pronunciation, with the exceptions noted above, has been done by Mr. Paul W. Carhart. The work of verification and definition of entries for the Gazetteer has been done by Frederick W. Kilbourne, Ph. D. The chief work of revising and enlarging the Biographical Dictionary has been done by Mr. E. L. Engle. Indebtedness to Prof. E. S. Sheldon of Harvard University should be acknowledged for advice about many intricate points of pronunciation and spelling; to Dr. K. Asakawa of Yale University for much assistance in determining the spelling and pronunciation of Japanese names; to Mr. Henry Rayment of London, England, for information about many English names; to Mr. Edward Tregear of Wellington, N. Z., Mr. J. P. Thomson of the Australasian Geographical Society, A. Meston, Esq., of Brisbane, Queensland, Mr. J. Lake of Melbourne, Victoria, and Mr. Fred J. Broomfield, and others whose work on the publishers' Australasian Gazetteer has been to a certain extent incorporated in this vocabulary; and to the many correspondents in the United States and in foreign countries who have answered queries about individual places and persons.

ELEMENTS OF PRONUNCIATION OF FOREIGN NAMES.

NOTE. In the following remarks it has been possible to describe only the more important sounds of the chief foreign languages. The descriptions of sounds that have no exact English equivalents are necessarily only approximate. In addition to giving information especially adapted to the names recorded in these dictionaries these rules are useful as an aid to the pronunciation of other names not included.

I. GENERAL OBSERVATIONS — ACCENTS, ETC.

§ 1. The number of syllables in a foreign name is usually to be determined by the number of vowels or diphthongs which it contains, except that doubled vowels generally belong to the same syllable.

In the following vocabularies, the number of syllables in a name is usually to be determined from the number of accents or hyphens, or of both together, in the respelling; thus the Russian name *Dniester* is pronounced, not dnĭ-ĕs'tĕr, in three syllables, but dnyĕs'tĕr, in two, the *ny* being employed to indicate a sound like that of *ni* in *minion*.

§ 2. Every letter, or combination of letters, occurring in the *respelling for pronunciation* of a word or name, is to be pronounced with its proper English sound as shown in the key line at the foot of the pages; e. g., *ch* is to be sounded as in *chair*, *g* as in *get*, etc. Thus, the pronunciation of *Chihuahua* is given as chē-wä'wä: many, however, have called it shē-wä'wä, not considering that if such had been the true sound it would have been so respelt.

§ 3. **Accent (stress).** Something analogous to English accent (*Guide to Pron.*, §§ 78–80) is found in nearly all languages. In the Teutonic tongues, especially, the accent is essentially the same as in English, a large number of the polysyllabic words having both the primary and secondary accent, as *Son'ders-hau'sen*, *Hoh'en-zol'lern*. It may be observed, however, that in none of the other languages, not even in the Teutonic, is the stress of voice thrown so strongly on a single syllable as it usually is in English; consequently, *the unaccented syllables are almost invariably pronounced more distinctly than by us* This is an important point to be borne in mind by those who wish to speak foreign words or names correctly. One should be careful to pronounce each vowel, *whether in an accented or an unaccented syllable, distinctly, if it is not expressly marked as obscure.*

Among what may be termed the principal European languages (as English, French, German, Italian, Russian, and Spanish) there is scarcely one general rule for accent to which there are not many exceptions, and this is especially true of proper names. The rules of most general application are perhaps the following: —

In **Danish, Dutch, German,** and **Swedish,** the main accent is most often on the first syllable, as in English.

In **French** the marks called accents that are placed over the different vowels serve only to indicate some particular sound of these letters, and not stress of the voice. (Cf. ê, é, ô, etc., under VOWELS.) It is commonly said that the French pronounce all the syllables of a word with an equal stress of voice, but that they *seem* to an English ear to accentuate the last, because in our language the universal tendency is to throw the accent toward the beginning of the word. As a matter of fact, the stress, which is weak in French, always falls chiefly on the last syllable of an isolated word, as ordinarily pronounced,

except when that syllable contains no sounded vowel; thus, *Molière*, mō/lyâr′, *Chambertin*, shaN/bĕr′tăN′, but *Castres*, kas′tr′. When, however, words are combined in speech the stress often shifts somewhat. In these lists, the principal accent has been placed on the last syllable of French names; at the same time it has been thought proper to mark the others with secondary accents, in order to prevent them from being pronounced too slightly or indistinctly, as is usually the case with unaccented syllables in English. The pronunciation of *Orléans*, for example, has been thus given, ôr′lā/ăN′.

In **Spanish** and **Portuguese**, names ending in a vowel most often have the accent on the penult; in Spanish those ending in a consonant except *n* or *s* are generally accented on the last syllable; yet to these rules there are numerous exceptions; e. g., *Alcalá*, *Alcántara*, *Almodóvar*, etc. The accent in both these languages is very weak.

In **Italian** and **Polish** the accent is usually on the penult.

In **Icelandic**, **Hungarian**, and **Bohemian** the accent is always on the first syllable, no matter how long the word, but it is not so strong as to interfere with the lengths of following syllables, which are pronounced distinctly.

In **Turkish** the accent is similar to the French accent, being very light and usually on the last syllable.

In **Hindustani**, **Urdu**, and many other **East Indian** names, the accent is on the last syllable if it ends in two consonants, or in a single consonant following a long vowel; otherwise it is on the penult, if that contains a long vowel; or it is on the antepenult.

In **Japanese** there is almost no accent. The stress is usually evenly distributed or falls slightly on the first syllable; as, *Satsuma*, săt′sōō-mä.

A **written acute accent** indicates a long vowel in Hungarian and Bohemian In Spanish it shows where the stress falls. In French it shows a particular quality of the vowel over which it is placed, as do also the other written accents. In Italian it shows both vowel quality and stress, as does also the grave, and also, often, the circumflex.

§ **4. Doubled letters.** A doubled vowel, in foreign words, is generally to be sounded more distinctly and fully than a single vowel of the same kind. This applies to nearly all the doubled vowels in foreign languages; **ee** and **oo** in Dutch and German, **ii** and **uu** in Danish and Norwegian, being simply equivalent to the single vowel prolonged. Doubled consonants are pronounced long or doubled (as *tt* in coat tail) in Italian, Swedish, Hungarian, Arabic, and Japanese; otherwise they are usually pronounced as a single consonant, as in English (e. g., *fatty*, *pron.* făt′ĭ, etc.). A doubled *r* in Spanish, Italian, etc., is pronounced as a long and strong trill. It is indicated by doubling the *r* in the respelling.

§ **5. Final consonants.** In the **Slavic** languages (Polish, Russian, etc.) and in **German** and **Dutch**, *b*, *d*, *g*, *v*, *z*, when occurring at the end of a word are never pronounced with their voiced sounds as in English, but are pronounced like *p*, *t*, *k* (or K), *f*, *s* (or *sh*) But cf. G under CONSONANTS. — Final consonants in **French**, except *c*, *f*, *l*, *r* (cf. *er*, § 8), are usually silent, but to this rule there are many exceptions, especially in proper names

☞ For the pronunciation of names from the **Latin**, classic **Greek**, and **Hebrew**, see *Guide to Pron.*, §§ 271–5.

II. VOWELS, DIPHTHONGS, and VOWEL COMBINATIONS.

§ **6. In general, the values of the vowels in the chief languages other than English** are as follows: **a**, when long, is like *a* in *art;* when short it is like *a* in *artistic* or like *a* in *ask*. **e**, when long and close, is like *a* in *ale;* when long and open it is like *a* in *care;* when short and close it is like *a* in *ale* pronounced quickly; when short and open it is like *e* in *met*. **i**, when long, is like *e* in *me;* when short it is like *e* in *event* or like *i* in *pin*. **o**, when long and close, is like *o* in *old;* when long and open it is like *o* in *or;* when short it is like *o* in *obey*, or between this and *o* in *odd*. **u**, when long, is like *oo* in *pool;* when short it is like *oo* in *pool* pronounced quickly, or like *oo* in *book*. — It should be carefully observed, however, that the English *a* as in *ale* and *o* as in *old* are *diphthongal*, more markedly so in British than in American English, the *a* as in *ale* ending in a vanishing sound like *ĕ* in *ĕ-vent′* or *i* in *pin*, the *o* in *old* ending in a vanishing sound like *oo* in *book*. In the foreign sounds, as in Spanish, Italian, French, or German, these *vanishing sounds* are entirely *absent*. The vowels **a**, **o**, **e** are often called *strong;* **i**, **u**, *weak*.

A.

§ **7. A**, in most languages other than English, never has a sound like that in the English words *fate* or *name*, but is usually like the *a* in *far* or in *artistic*, as in Italian, German, and Spanish; or it is like the *a* in *fast*, often approximating that in *fat*, as commonly in French. — In Hungarian **a** is about like *o* in *hot;* **á** is like *a* in *father*. — **Short a** in Sanskrit and many East Indian names is like *u* in *but* or *a* in *sofa*.

ä (or **ae**) in German when long is like *a* in *care*, or in many parts of Germany like *a* in *fate;* when short it is like *e* in *met*. — In Swedish **ä** is like *e* in *there* (or often *a* in *at*) or in *met*.

ă in Roumanian is nearly like *i* in *tin;* in French, nearly like *a* in *far*.

ą in Roumanian is somewhat like *e* in *her* or *u* in *fur*.

ą in Polish is like *o* in *nor* (generally nasal. See § 17).

å in Swedish, in the best usage, sounds like English *o* in *so*, but it is pronounced by many Swedes like *a* in *fall*, which is the older sound. When short it is like *o* in *not*.

ã in Portuguese (see III.).

aa in Danish and Norwegian usually sounds nearly like English *a* in *fall*, sometimes approaching *o* long. — In German and Dutch, **aa** is like *a* in *art*.

ae (or **ä**) in German is like *a* in *care*, when long, or by many like *a* in *fate* (cf. **ä**); when short it is like *e* in *net*. — In Dutch and Flemish **ae** is like *a* in *far*. (In the modern Dutch orthography, *ae* is replaced by *aa*. Thus, the name formerly written *Haerlem* is now *Haarlem*, etc.) — In Danish and Norwegian **ae** often is like *a* in *fat;* in Welsh it approaches the sound of *i* in *ice*.

ãe in Portuguese (see III.).

ah in German is like *a* in *art*.

äh in German is the same as German long **ä**.

ai is usually a diphthong, compounded of the sound of *a* as in *far* and *i* as in *fig*, or *ĕ* as in *ĕ-vent′*, thus nearly corresponding in sound to English long *i* in *side* (by which it is often represented). — In French it is pronounced nearly like *ai* in the English word *rail* or like *a* in *fate*.

ai (αι) in modern Greek when long is like *a* in *name;* when short like *e* in *met*.

ail and **aill** in French (see *il*, *ill*).

aim, **ain** in French (see III.)

aj in Danish approaches *i* in *side;* in Hungarian it is like *oi* in *boil;* as, *Tokaj* (tō′koi).

áj in Hungarian is *ä′ĕ* (almost like *i* in *side*).

am, **an** in French and Portuguese (see III.).

ão in Portuguese (see III.).

au has generally the sound of *ou* in *house* or *ow* in *now*. — In French, **au** has the sound of long *o* in *hope* (cf. *eau*). — **au** (αυ) in modern Greek sounds like *ave* in *have* (but with the *a* as in *ask*) before vowels and voiced (sonant) consonants, and like *aff* in *chaff* before voiceless (surd) consonants.

äu in German is like *oi* in *oil*. It has the same sound as German *eu*.

auw in Dutch is like *ou* in *house*.

av in Danish before a consonant is usually like *ou* in *house*.

aw in Welsh is like *ou* in *house*.

ay (see **y**) is generally like **ai** above; in French it sounds like *a* in *ale*, but if a sounded vowel immediately follows, it is the same sound (sometimes *a* in *fast*), followed by *y* as in English *yet*.

E.

§ **8. E** generally has a sound similar to *a* in *fate*, or else to *e* in *there* or, when short, to *e* in *met*. Cf § 6. — In French, **e** without written accent is regularly silent when final, and it is occasionally so in Danish and German. It is usually also silent in French, or very short and obscure, like *e* in *battery*, when it ends a syllable other than the last. — In German, **e**, unlike the other vowels, is more or less obscured in unaccented syllables, especially in the unaccented prefixes *be-* and *ge-*, and in final unaccented syllables. — In Russian, **e** after the dentals (*d*, *t*, *l*, *n*), and in the beginning of syllables, has the value of *ye* in *yet;* after the labials (*p*, *b*, *m*) and others it approaches *a* in *fate*, though sometimes it is *ye* as in *yet*. Accented **e** in Russian is often like *yo* in *York*, but after a sibilant it is like *o* in *for;* as, *Vyshni Volochek* (-chŏk′). — Final unaccented **e** in Portuguese is almost mute. — In modern Greek, **e** (for ε) is like *a* in *name*, or *e* in *met*, or (for η) like *e* in *me* or like *i* in *pin*.

é in French is like *a* in *fate*. Cf. § 6. — **è** and **ê** in French when long are like *a* in *care;* when short, like *e* in *met*.

ę in Polish (see III.).

ĕ in Bohemian is like *ye* in *yet;* as, *Prostějov*, prŏs′tyĕ-yŏf.

eau in French (cf. **ou**) is like long *o*, as in *hope*.

ee, as in German, is generally like *a* in *ale* prolonged but not diphthongal. Cf. § 6.

eeu and **eeuw** in Dutch are like *a* in *ale*, followed by the sound of *oo* in English *book* or of *w* in English *we*, as in *Leeuwarden* (lā′wär-dĕn), but **eeuw** followed by an obscure *e* is like *a* in *ale* followed by Dutch *w* (about English *v*), as, *leeuwen*, pronounced lā′vĕn.

eh in German is like *a* in *ale*. Cf. § 6.

ei is generally a diphthong, combining the sounds of *a* in *fate* (or *e* in *met*) and *ĕ* in *ĕvent*, being similar to *ay* in *day* or *a* in *ale* when pronounced very full (cf. **E**, above). — In French **ei** is like *a* in *ale*, without the final *i*-sound (cf. § 6). — In German and Welsh **ei** is like *i* in *side*. — In Dutch **ei** is between *i* in *ride* and *ei* in *veil;* in South African Dutch it is more distinctly like *ei* in *veil*. — In modern Greek **ei** is like *e* in *me* or *ĕ* in *ĕ-vent′*.

ein in French (see III.).

ej in Danish is like *i* in *ice;* in Hungarian it is similar to *ei* in *veil*, or like *ĕĭ* in one syllable.

em, **en** in French and Portuguese (see III.).

er in French, when final, is regularly like French *é*, or *a* in *ale*, as in *Gautier* (gō′tyā′), but in proper names the *r* is often sounded, as in *Gérardmer* (pronounced in both ways).

es in French, unless the *e* is written è or é, is usually silent, as in *Charles* (shärl).

et in French, when final, is usually like French è, as in *Monet* (mō′nĕ′).

eu in French and Dutch has a sound nearly like *u* in the English word *fur*, or the *e* in *her*. If the lips are put in position to pronounce *oo* and while they are held in that position the speaker tries to pronounce *a* in *ale*, a close approximation to the sound may be obtained. This sound is represented by *u* in *fur*, in the respelling for pronunciation. — **eu** in German is like *oi* in *oil*. In modern Greek **eu**, representing *ev*, is pronounced *ev* when a vowel or a voiced (sonant) consonant follows, and *ef* when a voiceless (surd) consonant follows. — Otherwise **eu** is a diphthong composed of *a* in *ale* or *e* in *met* and *oo*.

ey is usually like *ei* (cf. *y*).

ez final in French is regularly like French *é*, but the *z* is sometimes sounded, either as *s* or as *z*, as in *Douarnenez* (dōō/ăr′nĕ-nĕs′ *or* -nĕz′).

I.

§ **9. I** usually sounds as in *marine*, or as *e* in *me*. It is often like our short *i*, as in *pin*. It is sometimes like *e* in *met*, as in the endings *-ling* and *-ling* in Danish names. It is important to observe that *i* final in French, Italian, Spanish, and some other languages, has the clear sound of *e* in *me*, but pronounced *short* it should, therefore, not be allowed to fall into *short i* (*ĭn*), as it usually does in English or in Anglicized words, nor, on the other hand, should it be prolonged.

i, unaccented before a vowel, often sounds like English *y* (*yes*), as in Italian, French, and Spanish, so that the combinations **ia**, **ie**, **io**, **iu** sound as **yä**, **yā** (or **yâ**), **yō**, **yōō**, etc. Thus, *Piedemonte* (pyā′dā-mōn′tā), *Armentières* (är′măN′tyâr′), *Piedad* (pyā-thath′). An unaccented *i*, following *c* or *g* and preceding *a*, *o*, or *u*, in Italian is silent, serving only to show that the *c* or *g* is soft, as in *Bracciolini* (brät′chō-lē′nĕ), *Correggio* (kŏr-rĕd′jō).

î is like *i* in *machine*, except in Roumanian, in which it is about like *i* in *pin*.

ĭ final in Roumanian is silent, but it palatalizes the preceding consonant; that is, it causes it to be sounded as if followed by the consonant *y*.

ia. See **i**, unaccented before a vowel, above.

ie. See **i**, unaccented before a vowel, above. — At the end of a word in French **ie** is always pronounced like *e* in the English word *me*, but shorter. — In German, **ie** has most often the sound of *e* in *me*, when long; of *i* in *pin*, when short. It has also often the sound of *ĭ-ĕ*, or *yĕ*, as in *Amalie* (ä-mä′lĭ-ĕ or -yĕ). — In Dutch **ie** is like *e* in *me*.

ieh in German is like *e* in *me*.

ien in French (see III.).

ieuw in Dutch is like English *ē* + *oo* pronounced in one wave of sound, or *ē* followed by *w* as in *we;* except when followed by obscure *e*, when it is like English *ē* followed by Dutch *w* (about Eng. *v*), as in *nieuwe* (nē′vĕ).

ih in German is like *e* in *me*.

ij in Dutch has no equivalent in English; it approaches long *i* in *ride* (cf. *y*), or, as heard by some, *ei* in *veil*. It has the same sound as Dutch *ei*.

il in French when final and **ill** in the middle of words (not when initial) is like English *ē* followed by *y* as in *yes*. When the *il* or *ill* are preceded by a sounded vowel they indicate simply the sound of *y* in *yes*. Formerly this *ll* was pronounced like *lli* in *million*, *Aurillac* being ō′rēl′yăk′, and some speakers still retain this pronunciation.

im, **in**, in French and Portuguese (see III.).

io, **iu**. See **i**, unaccented before a vowel, above.

O

§ **10. O**, when long, has, in general, either the sound of English *o* in *old* or of *o* in *or;* when short, it is like *o* in *obey*, or, often, it is a sound intermediate between this and *o* in *odd*. Cf. § 6. One should be careful not to pronounce short *o* in French, German, and Italian names with a sound resembling *a* as in *far*, as short *o* is apt to be in English. — In Russian, **o**, before the accent, is almost like *a* in *fast*. — In Swedish and Norwegian, at the end of a syllable, **o** is sounded like English *oo*, and so also in Polish when written **ó**; as, *Lwów*, lvŏŏf. — Unaccented **o**, in Portuguese, is often like *oo* in *book*, pronounced very lightly, as in **Oporto** (-tŏŏ).

ö (cf. **eu**) occurs in several European languages. The sound that it represents is unlike any in English, the nearest English sound being *e* in *her*, or *u* in *fur*, the latter (ū) being used in the respelling. If, while the lips are retained in the position for forming *o* long, the speaker tries to utter the sound of *a* in *ale*, the sound of ö long may be produced; the short ö is pronounced by holding the lips in the same position and uttering *e* in *met*. This sound, as well as that of the French **u** (German **ü**) and French *eu*, should, if possible, be learned from an instructor.

ô in French is like English *o* in *so*.

õ in Portuguese (see III.).

oe in some German and other names is equivalent to **ö**, and has then the same

sound as ö. — **oe** is pronounced like *o* in *so* in Low German names; as, *Koesfeld*, *Itzehoe*, etc. — In Dutch **oe** is like o͝o or ŏŏ. — In Welsh **oe** is somewhat like English *oi* in *oil*.

ǒe in Portuguese (see III.).

œu in French is like **eu** or **ö** (above).

oh, as in German, is like *o* in *so*.

oi in French is usually sounded like *uä*, or *wà*; *moi* is pronounced mwä, or mwà; *roi*, rwä, or rwà, etc. — In modern Greek, **oi** (οι) is like *i* in *marine*. — Elsewhere **oi** is generally like *oi* in *boil*. In a few Low German names, as *Voigtland*, it is like *o* in *so*.

oin in French (see III.)

öj in Danish is somewhat like ö (see **ö**) followed by consonant *y*.

oo is like English *o* in *note*, or the same prolonged. Cf. § 6. — In Dutch **oo** is like *o* in *note* prolonged, but in South African Dutch it is like *oo* in *pool*; thus *oom* (*Du.* o͝m; *So. Afr. Du.* o͝om).

ou in French and in modern Greek (ου) sounds like English *oo*; in Dutch and Norwegian, like *ou* in *house*; in Portuguese it is nearly like *o* in *so*.

ouw in Dutch is like English *ou* in *house*.

ow, unaccented, in Low German names, sounds like English *o* in *so*; as, *Grabow*.

U.

§ 11. **U** in most languages is pronounced like the English o͞o or o͝o In French (and in Dutch when it ends a syllable, cf. **uu**), **u** may be said to combine the sounds of English *oo* and long *e*. If the speaker, after placing his lips in the position for pronouncing *oo*, endeavors, without moving his lips, to utter the sound of *ee*, the sound of French *u* may be produced. The symbol **ü** is used in the respelling to represent this sound. — If a consonant follows in the same syllable, Dutch **u** has a sound nearly like English *u* in *but*; it retains this sound even before *r*. — Swedish **u** is like English *oo*, or sometimes somewhat like *u* in *but*, or *e* in *her*. — In Welsh, **u** is like English *i* in *marine*, or *i* in *pit*. — **u**, final, in Roumanian is usually silent; as, *Neamțu* (nyämts). — It is often nearly silent in Japanese. — **u** is otherwise sometimes silent, as in *gu*, *qu* (see IV.).

u, unaccented before a vowel, as in Italian and Spanish, is often pronounced like English *w*, **ua**, **ue**, **ui**, **uo** sounding as *wä*, *wā* (or *wâ*), *wē*, *wō* (or *wô*), etc., as in *Buena* (bwā′nä), Fuego (fwā′gō), etc. Cf. **i**, unaccented before a vowel.

ü in German, Hungarian, and Turkish, is like the French *u*, and **ue** is sometimes used to represent this sound, otherwise **ue** combines the sound of both *u* and *e*.

uh in German is like *oo* in *pool*. — **üh** is like ü, long.

ui in French is French *u* + *ĕ* pronounced in one wave of sound (but compare *gu* and *qu* below); *wē* is a close approximation to this sound. — In Dutch, **ui** (**uy**) approaches English *oi* in *oil*, or is like **eu** in French.

um, un in French and Portuguese (see III.).

uu in Dutch is like French **u**, pronounced long. — French **uy** is like French **ui**, or, if a pronounced vowel follows the *y*, it is like French *ui* + *y* as in *you*.

Y.

§ 12. **Y**, as a vowel, is usually like **i**; that is, like English *ē*, *ĕ*. — In Danish, Swedish, and Norwegian it is like French *u*. — In Dutch and Flemish (now usually **ij**) it is like ī in *side*. — In Spanish, **y** is a vowel only when standing alone, as in **y**, *and*; or at the end of a word. It does not occur between consonants in Spanish, being replaced by **i**. Cf. **y**, as a consonant, under CONSONANTS.

ym, yn in French (see III.).

III. NASAL VOWELS AND DIPHTHONGS.

§ 13. **M** and **n** in French and Portuguese when final, or before any other consonant than another *m* or *n*, and following a vowel or a diphthong, show that the preceding vowel or diphthong is pronounced with a nasal tone. In producing these nasal vowels, the breath or voice is allowed to pass out through *both* the *nose* and the *mouth*, so that the vowel sounds remain unchanged, except for the accompanying nasalization. The *m* or *n* is not sounded, except as thus giving the nasal tone to the vowel. These sounds thus differ materially from English vowels *followed* by *n* or *ng*, the *oral* passage in pronouncing *n* or *ng* being entirely closed. A small capital N is used in the respelling for pronunciation to indicate that a preceding vowel or diphthong is nasal.

§ 14. The **nasal vowels in French** are: **am, an, em, en** (cf. **ien**), all having regularly the sound of English *a* in *far*, made nasal as described above. — **aim, ain, eim, ein, im, in, ym, yn**, all having the sound of *a* in *fat* made nasal. — **ien**, final, is like *y*, followed in the same syllable by *a* in *fat* made nasal. — **om, on**, having the sound of *o* in *or* made nasal. — **um, un**, having the sound of *u* in *up* made nasal. There are thus four French nasal vowel sounds, as in the phrase, *un bon vin blanc* (ŭN bôN vĂN bläN), *a good white wine*.

§ 15. In **Portuguese, the nasal vowels** are indicated by *m* and *n* as described above or by the tilde (˜) written over the vowel; **ã** (cf. **ãe** below), **am, an**, are about like English *a* in *far* made nasal. — **em** and **en** are about like *a* in *ale*, or *e* in *men*, made nasal. — **im** and **in** are *i* in *ravine* made nasal. — **õ** (cf. **õe** below), **om, on**, are *o* in *pole*, or in *obey*, made nasal.

The **nasal diphthongs** in Portuguese are: **ãe**, about like *i* in *ice* (äĭ), nasalized; **ão**, like *ou* in *house*, nasalized; **õe**, about like *oi* in *oil*, nasalized.

§ 16. Final **on**, in Spanish, especially in parts of Spanish America, is often pronounced with the sound of *o* in *for*, made nasal, but this pronunciation is not recommended.

§ 17. In **Polish**, **ą**, nasal, is like *ô* in *for*, made nasal. — **ę** in Polish is *e* in *men* made nasal; thus, *Lęczyca*, lĕN-chĭ′tsä.

IV. CONSONANTS AND CONSONANTAL COMBINATIONS.

§ 18. The consonants in the languages of Continental Europe are, for the most part, similar in sound to the same letters in English. The following exceptions may be mentioned: —

B.

§ 19. **B** at the end of a word in German, Dutch, and the Slavic languages, is pronounced like *p*. — In Spanish and modern Greek, **b** has nearly the same, but not quite so forcible, a sound as in English, being made with the lips brought together, but with loose or feeble contact, not pressed together firmly as in English. **B**, therefore, in these languages often sounds like English *v* as in *have*. Between two vowels, this similarity to *v* is more marked, so that the two sounds are often interchanged, such interchange often being marked by a corresponding interchange in spellings; as, *Córdoba*, *Córdova*, etc. Cf. *Guide to Pron.*, § 133.

bh in Sanskrit and many modern East Indian names is strictly *b* + *h*, as in *cob house*, but the *h* may be omitted in English pronunciation.

C.

§ 20. **C** before *e* and *i* in Italian and Roumanian (*c* in Roumanian before î = *k*) is pronounced like *ch* in the English word *chill*; in the same position in Castilian Spanish it sounds like English *th* in *thin*; but throughout Spanish America, in the Philippine Islands, and in parts of Spain it is commonly pronounced like English *s* in *sun*. — It is like *s* in *sun* in French, Portuguese, and Catalan before *e*, *i* (or *y*). — In German, **c** before *e*, *i*, and *y*, is pronounced like the German *z*, or like *ts* in English. — In the Slavic languages, it has the same sound, even at the end of a word; thus, *Prypec* is pronounced prip′ets. — Before *a*, *o*, or *u*, **c** usually has the sound of *k*. — In Welsh and Gaelic, **c** is in all positions like *k*. — In Hungarian, **c** is sometimes used for Hungarian *cz*.

ca See **c**.

ç is like *s* in *sun*.

č in Bohemian, Croatian, and Bulgarian is like English *ch* in *chop*.

ć in Polish and Servian is about like English *ch* in *chop*; as, *Zamość* (zä′mŏshch), *Karadzić* (kä-rä′jĭch).

cc in Italian before *e* and *i* is *ch* prolonged, or like *t-ch* as in chi*tch*at.

ce. See **c**.

ch in Spanish has the same sound as in the English word *chill*. — In Catalan and Italian it is pronounced like *k*. — In German, Polish, and some other languages, it has a guttural sound, somewhat like a strongly aspirated *h*. This sound must be learned from an oral instructor. — In French (except in the case of some words derived from the Greek), and in Portuguese (with the same exception), **ch** has the sound of English *sh*, as in *she*. — **ch** in Sanskrit and East Indian names is usually like *ch* in *chop*; **chh** is the same followed by *h*, as in Marc*h h*are, but the second *h* may be omitted in English pronunciation.

ci. See **c**.

co. See **c**.

cs in Hungarian sounds like English *ch* in *church*.

cu. See **c**.

cz in Polish sounds like English *ch* as in *church*; as, *Czersk* (chĕrsk); in Hungarian, like *ts*; as, *Czegléd* (tsĕg′lād).

D.

§ 21. **D** is, in general, more clearly dental than in English, that is, it is made with the tip of the tongue brought against the back of the upper front teeth, whereas in English it is commonly made with the tip of the tongue against the back gums, above the teeth. — At the end of a word, in German, Dutch, and the Slavic languages, it is pronounced like *t*. — In Spanish, Danish, and modern Greek, between two vowels or at the end of a word, it has a sound similar to *th* in *this*; some authorities regard the final **d** in Spanish as nearer *th* in *thin*; in colloquial Spanish final **d** is often omitted altogether; as, *Madrid* (mä-drē′). — In Danish and Norwegian **d** is silent after an *l* or *n* in the same syllable.

dd in Welsh is like *th* in *that*.

dh in many East Indian names is *d* + *h*, as in dead *h*ouse, but the *h* may be omitted in English pronunciation

ds in Hungarian is like English *j* in *joy*

dt is like *t*.

dy in Hungarian blends the sounds of *d* and consonant *y*, and hence approximates the sound of English *j* in *joy*. The same combination occurs in some English words, as in sol*dier*, etc. (cf. **gy**).

dz is often like English *j* in *joy*.

G.

§ 22. **G**, in all the European languages, is hard before *a*, *o*, and *u*; in German, Danish, Norwegian, and modern Greek, it is hard in every situation, though it sometimes has a guttural sound. — Before *e* and *i* (or *y*), in French, Portuguese, Spanish, Swedish, and Roumanian (also before *ä* and *ö* in Swedish), it is like the *j* of these languages. To represent the *j* sound in French before *a*, *o*, *u*, an unaccented *e* is written after the *g*, the *ge* being equal to French *j* (*zh*). — Before *e* or *i* in Italian, **g** sounds like English *j* in *joy*, or soft *g*, as in *gem*, and **gg** in the same position is the same sound prolonged, or like *d j* in could *j*ump; as, *Correggio* (kŏr-rĕd′jō). — In Dutch, **g** is always pronounced like German *ch*, described above, or like a strongly aspirated *h*. — Final **g** in German is like German *ch* or, as pronounced by some, like *k*. — In modern Greek, **g** before *e*, *i*, and *y* is sounded like English *y*. — In Swedish, **g** after *l* or *r* at the end of a primitive word or syllable is like English *y* in *yes*; thus, *Göteborg*, yû′tĕ-bŏr′y'.

gh in Italian is like *gh* in the English word *ghost*, or *g* in *game*, and it also has this pronunciation in Roumanian. — In Irish it is often given like a simple *h*. — In Oriental names it occurs as a strong guttural.

gli in Italian is, in nearly all cases, like *lli* in Willi*am*, and if no other vowel follows, the *gl* takes the same sound, the *i* having its usual sound of English *e* in *me*.

gn in French and Italian (like *ñ* in Spanish and *nh* in Portuguese) combines the sounds of *n* and consonant *y*; that is to say, it is about like English *ni* in *on*ion.

gu in French, followed by *e*, *i*, or *y*, is usually pronounced like English *g* in *gay*, the *u* being silent; if followed by a consonant or *ë*, the *u* is pronounced as ordinary French *u*. — In Spanish, **gu**, before *a*, *o*, *u*, sounds like *gw* (or *gu* in *anguish*); before *e* or *i*, it is like *g* in *go*, unless the *u* is marked with the diæresis (*ü*), when it is pronounced *gw*. — In Italian, **gu** is *gw* before any vowel. — In Portuguese, **gu** before *e* or *i* is like English *g* in *go*.

gy in Hungarian blends the sounds of *d* and *y* consonant; thus, *Magyar* is pronounced mŏd′yŏr, *Gyula* is dyŏ′lŏ.

H.

§ 23. **H** in French, Italian, Spanish, and Portuguese, is either never pronounced at all, or else is sounded so slightly that an English ear can scarcely perceive it, but see the combinations **ch, gh, lh, nh, sch**. In most of the other languages of Europe it has the same sound as in English (but cf. **th**); in German it is silent between two vowels in the same word, except when followed by *ei*. When final, *h* is generally silent, but in some instances *h* at the end of Persian or Arabic names is distinctly pronounced.

J.

§ 24. **J** in Italian, German, Polish, Hungarian, Swedish, Norwegian, Danish, and Dutch, is pronounced like English *y* in *yes*. — In French, Portuguese, and Roumanian, it has the sound of *zh*, or *s* in the English word *pleasure*. — In Spanish, **j** is similar in sound to a strongly aspirated *h*; **x** is often found for this sound, where the usual modern spelling is with *j* or *g*; thus, *Méjico* is the modern Spanish spelling of *Mexico*. — In many East Indian names **j** is like English *j* in *jay*, and **jh** (strictly *j* + *h*) may be pronounced in the same way.

K.

§ 25. **K** in Swedish before *e*, *i*, *ö*, *y*, in accented syllables is like *ch* in *chop*; as, *Linköping* (lĭn′chœ′pĭng). If the syllable is not accented, it is like *k* in *king*; as, *Blekinge* (blā′kĭng-ē).

kh in Russian names sometimes indicates a guttural like German *ch*. In Oriental names it is usually guttural. In East Indian names it is like *kh* in in*kh*orn, but may be given as simple *k* in English pronunciation.

L.

§ 26. **L**, in general, is more distinctly dental than in English (cf. **d**), and the back of the tongue is not raised, as it commonly is in pronouncing English *l*, which is thus "dull" or guttural in comparison. — For **l** in Polish see **ł** and **lh**.

L, l in Polish may be given as English *l*, though it is still more guttural in quality than the ordinary English *l*.

lh in Portuguese, **ll** in Spanish, and simple **l** in Polish, combine the sound of *l* and *y* consonant. Thus, *velho* is pronounced vāl′yō; *villa*, vēl′yä; *llano*, lyä′nō.

ll, initial as well as medial, is often pronounced like English *y* in *yes* in Spain and in Spanish America, but in careful speech the sound of *l* as shown above is retained. — **ll** in

Welsh (voiceless *l*) is hardly to be imitated in English. It may be approximated by pronouncing English *h*, *th*, or *t* in connection with *l*. — In Icelandic **ll** is like *dl*.

ly in Hungarian has the sound of Spanish *ll*.

N

§ **27.** **N**, in general, is more distinctly dental than in English (cf. **d**). Before *k*, *q*, or a hard *c* (= *k*) or *g* (gŏ), **n** often has the same sound as in English *ink* (ĭŋk), as in Italian and Spanish.

ñ in Spanish (like *gn* in French and Italian, and *nh* in Portuguese) has a sound combining those of *n* and *y* consonant, and **ń** in Polish and **ň** in Bohemian, Croatian, Servian, and Bulgarian, also have this sound; as, *Třeboň*, trzhĕ′bŏn-y′.

ng in German is like *ng* in English *singer* — In the Maori and some other languages, **ng** is not divided, but, even when initial, is a single sound like the *ng* in *singer*; as, *Tonga*, tŏ′ngä.

nh in Portuguese is pronounced like the Spanish *ñ*, as, *Minho*, mēn′yŏŏ.

nt in modern Greek is like English *d* or *nd*.

ny in Hungarian and Catalan has the same sound as Portuguese *nh*.

O.

§ **28.** **Qu** before *e* and *i* in Portuguese and Spanish, and before every vowel in French, has the sound of *k*. In most other languages, it is essentially the same as in English (as in *queer*). In German, it is like *kv*, as, *Quierschied*, kvēr′shēt.

qv in Swedish is like *kv*.

R.

§ **29.** **R** in most European languages is strongly trilled, either with the tip of the tongue, as in Italian and Spanish, or with the uvula (extremity of the soft palate), as in many parts of Germany and France.

ř in Bohemian is like *r* followed by *zh* (*z* in *seizure*), as, *Třeboň*, trzhĕ′bŏn-y′.

rz in Polish has the sound of *zh*; as, *Zgierz*, zgyĕzh.

S.

§ **30.** **S** in many European tongues, when between two vowels, has the sound of English *z*, or one very near it. — In German, it is usually properly pronounced as English *z* in *zone*, when initial before vowels, and when medial before vowels; like English *s* in *so*, when initial before consonants, medial before consonants, and final. Initial **s** in German in *sp*, *st*, is properly pronounced like *sh* in *shoe*, though many pronounce these combinations with simple *s*, as, *Spandau* (shpän′dou), *Strehlen* (shtrā′lĕn). — In Hungarian, **s** sounds like English *sh*, as in *she*, or German *sch*. — In Portuguese when final, or when preceding any surd consonant except another *s*, **s** sounds like English *sh* in *ship*; before a voiced (sonant) consonant it is like *zh* (*z* in *seizure*). — In French, final **s** is sometimes pronounced, but it is generally silent.

š in Bohemian, Croatian, Servian, and Bulgarian is like English *sh* in *ship*; thus, *Vyškov*, vĭsh′kŏf.

ş in Roumanian has the sound of English *sh* in *ship*.

şc or **şt** in Roumanian before *e* and *i* is like *sh* in *ship* followed by *t*.

sc in Italian before *e* and *i* sounds like the English *sh*; as, *Sciglio*, shēl′yō, etc. See **sch**.

sch in German is pronounced like *sh* in English *shoe*. — In Italian and Roumanian, before *e* and *i*, it sounds like *sk* in English. — In Dutch, before all the vowels, except obscure *e*, its sound is similar to *sk* but harsher and more guttural, being equal to *s* + Dutch *ch*. Before an obscure *e* or before a consonant, or at the end of a word, **sch** in Dutch sounds like a strong *s*, as in English *see*.

sj in Dutch, Danish, and Swedish is like *sh* in *ship*.

sk in Swedish before *e*, *i*, or *y* resembles *sh* in *ship*. — In Norwegian, before *i* or *y* it is as *sh* in *ship*.

skj in Swedish and Norwegian resembles English *sh*.

ss in Hungarian is like *sh* in *she* prolonged.

ssz in Hungarian is long *s*.

stj in Swedish is nearly like *sh* in *she*.

sz in Hungarian is sounded like English *s* as in *see* or *ss* (cf. **zs**). — In Polish, **sz** sounds like English *sh* in *ship*; as, *Warszawa*, vär-shä′vä.

T.

§ **31.** **T**, in general, has a sound somewhat more dental than is common in English (cf. **d**). — In modern Greek, **t** after *n* is pronounced *d*; as, *Talanta*, tä-län′dä. — In French, **t** final is usually silent.

ţ in Roumanian is like *ts*; as, *Romanaţi* (-näts).

th in all modern languages of Continental Europe except modern Greek (in which the character has the same sound as English *th* in *thin*) is pronounced like simple *t*, or like *th* in the English word *thyme* (tīm). — In Welsh and Icelandic it is like *th* in *thin*.

tsch in German is like *ch* in *chip*

tsh in the Slavic languages has the sound of *ch* in *chip*

tl in Mexican names is like *tl* in *Atlanta*, though it sometimes sounds like *kl* In the Spanish pronunciation of Mexican names, *tl*, when final, is like Spanish *te* (tā).

ts in Hungarian is like *cs* in the same language; that is, like English *ch* in *church*.

ty in Hungarian blends the sounds of *t* and consonant *y*; it approaches in sound English *ch*. A similar combination of *t* with the sound of consonant *y* (as the initial element of ū) takes place in the English words *creature*, *virtue*.

tz is like *ts*.

V.

§ **32.** **V** in the Slavic languages (Polish, Russian, etc.) and in German and Dutch, when occurring at the end of a word or name, is always pronounced like English *f*. — In German, **v**, except in some foreign words, mostly recent, and of Latin or Romance origin, is like English *f*.

W

§ **33.** **W** in German, and in some other languages, is like English *v*. It is often uttered with the lips alone, without the aid of the teeth, though in German **w** is properly pronounced as English *v*. — In Welsh, **w** is usually like *oo*; as, *Ebbw*, ĕb-bōō′. — In Polish, **w** when ending a syllable is pronounced like English *f*, but is frequently omitted in pronunciation before the ending *ski*; as, *Żotkiew* (-kyĕf), *Paderewski*, -rĕf′skē or -rĕs′kē. — See **eeuw, ieuw, ow.**

X.

§ **34.** **X** in modern Spanish spelling is usually equal to English *x* as in *box*, but it is often found representing the sound of Spanish *j* or *g*, described above, the spellings with *j* or *g* being now preferred. In Mexican names it often has the sound of *s*; as, *Tlaxcala*, tläs-kä′lä. — In Portuguese and Catalan, **x** is like English *sh* in *ship*.

Y.

§ **35.** **Y**, as a consonant, at the beginning of a word or syllable and before a vowel, is like English *y* in *yes*, but usually more emphatically pronounced, often sounding almost like French *j*, or English *z* in *azure*, or even, sometimes, like the English *j* in *joke*. — In Russian, **y** before a vowel has the sound of English *y* in *yes*, but, if preceded at the same time by another consonant, that consonant is "palatalized" by the *y*, **ly**, for instance, sounding like *lli* in *million*, **ny** like *ni* in *onion*, **ty** like *ty* in *hit you*. Cf. **y**, as a vowel, under VOWELS.

Z.

§ **36.** **Z** in German has the sound of *ts*. — In Italian, **z** and **zz** are usually sounded like a strong, prolonged *ts*, but they sometimes have the sound of a long *dz*. — In Spanish, **z** is pronounced like the English *th* in *thin*, but throughout Spanish America and in parts of Spain it is pronounced like *s* in *sun*. See *Guide to Pron.*, § 268. — In Swedish, **z** has the sound of English *s* in *sun*. — In Dutch, **z** is like English *z*. — In French, **z** either is silent or has the sound of English *z*. — In Portuguese, **z** when final is about like *sh* in *ship*.

ż in Polish is like *zh* (*z* in *seizure*); as, *Lomża*, lŏm′zhä.

ž, in Bohemian, Croatian, Servian, and Bulgarian is like *zh* (or *sh* when final); as, *Žižkov*, zhĭsh′kŏf.

ź in Polish is about like *zh* (*z* in *seizure*).

zs in Hungarian is like *zh*.

V. SYMBOLS.

§ **37.** The symbols used in the respelling for pronunciation in the GAZETTEER and BIOGRAPHICAL DICTIONARY are the same as those employed in the body of the book, a full explanation of which will be found in the GUIDE TO PRONUNCIATIONS.

A PRONOUNCING GAZETTEER

OR

GEOGRAPHICAL DICTIONARY OF THE WORLD

GIVING THE SPELLING, PRONUNCIATION, LOCATION, SIZE, POLITICAL RELATIONS, AND OTHER ITEMS OF INTEREST FOR MORE THAN THIRTY THOUSAND PLACES

THE changes in the present REVISION OF THE GAZETTEER have necessarily been more numerous than in any preceding revision, owing to the great changes in boundaries, populations, jurisdictions, and forms of government brought about by the World War throughout the world and particularly in Europe, the political upheaval in Russia, the progress of discovery, as in the polar regions, and the rapid development of some parts of the world, as Africa.

In this NEW EDITION also the latest statistical information from the decennial censuses taken in 1920 and 1921 by the leading nations of the world has been inserted. The latest official decisions respecting the spelling of place names have been recorded. For foreign countries, places have been entered under their names in the present official native language, except where usage has established a conventional form, as for *Cologne, Vienna, Bagdad, Mocha.* In such countries as Poland, Czechoslovakia, Yugoslavia, Roumania, etc., where names from two or more languages have been in currrent use, the Polish, Czech, Serbian, or Roumanian name has in many cases officially replaced the formerly better-known German, Russian, or other foreign name, and where such names have become established they have been preferred in this Gazetteer, as *Kalisz* (formerly *Kalish*), *Bratislava* (*Pressburg*), *Zagreb* (*Agram*), *Braşov* (*Kronstadt*), although both forms have been given in all such cases and cross references made from the smaller type at the foot of the page. Also, many ancient names of common occurrence in history or in the classics have been inserted.

The AIM OF THE GAZETTEER is to answer concisely and accurately the ordinary questions that arise in regard to geographical names: What is the correct spelling of a name and its correct pronunciation? What is the location and what is the population of a town, height of a mountain, length of a river, area of a lake, county, or state? What historical, political, or other items of interest relate to it?

The CHOICE OF TITLES from the constantly increasing mass of geographical material has been a difficult task. Those names have been selected which seemed of most interest to English-speaking readers. Thus there have been included all of the incorporated places (cities, boroughs, towns, villages, etc.) in the United States having more than fifteen hundred inhabitants according to the Fourteenth Census (1920). For other countries, a higher limit of population has necessarily been chosen, varying somewhat according to the probable frequency with which names in any particular country would be sought. At the same time, many places below the adopted limit of population have been inserted because of their historical, literary, or other interest.

Cross References from entries in the upper part of the page are to entries in the Dictionary proper, unless the Gazetteer is specified by (*Gaz.*). Cross references from entries in the smaller type at the foot of the page are to the Gazetteer entries in the upper part of the page, except in a few instances where the Dictionary is specified. A useful feature is the linking together of the entries in the Gazetteer with pertinent information in the main Vocabulary of the Dictionary. Thus, under **New York** are references to BOWERY, EAST SIDE, TAMMANY, TENDERLOIN, etc., and under **London** to CHARING CROSS, CHEAPSIDE, PICCADILLY, and many other entries where interesting facts respecting New York and London are recorded.

Spelling and Pronunciation. When two or more forms of spelling or of pronunciation are recorded, that one has been given first which has been selected as preferable. Each form entered, however, has the support of good usage, and often this usage is practically equally divided. Further details of spelling and pronunciation are given at page 2375.

Areas. The areas given for countries, subdivisions, etc., are from the latest official figures and in each case generally include the inland water, as for States of the United States, for Canada, Great Britain, etc., but none of the adjoining waters, as of oceans, seas, etc.

Populations. Official census figures are now available for most civilized countries and for many less civilized parts of the world that are under their jurisdiction, and the latest available figures have been used in compiling this Gazetteer. Where resort to estimates has had to be made, the figures given are the best to be had. The population figures record the resident population, where this could be had, as in the United States census. When no population figure is given for a place, it means, generally, that the population is less than 1,000 (1,000 being indicated by 1), or, rarely, that the population is unknown.

Terminology. The designations generally used for the various subdivisions of countries, states, etc., as *province, departmcnt, compartimento, county, nome, canton, circle* (Ger. *kreis*), *intendancy, district,* etc., and for places, as *municipality, city, town, village, borough, commune,* etc., will be found clearly defined in the Dictionary. A few such divisional or place designations are here given with explanations of their specific census use:

Borough. The *borough* is generally a town or municipal corporation, often one with a particular form of municipal government (see BOROUGH, *n.* in the *Dict.*, esp. defs. 1b, 2, 3, 4, 5, and 6; also MUNICIPAL, *a.*, esp. def. 2). In Scotland the borough is specifically called *burgh* (see BURGH, *n.*, in the *Dict.*). In England and Wales the *county borough* (abbreviated to *co. bor.* in the Gazetteer) while located geographically in a county, is distinct from the "administrative county" and is independent of the county council, but in other municipal boroughs (*mun. bor.* in the Gazetteer) the county council exercises some powers and duties and these boroughs pay their share of the county expenses. In those counties that include geographically a county borough or boroughs the population including such borough or boroughs is given in the Gazetteer, and also that of the administrative county only.

Commune. The *commune* is the unit of local government in France. It generally consists of a town or village and, often, a considerable portion of the surrounding country. Communes vary greatly in size and population. Similar districts in various other countries, particularly many of the European countries and their colonies, are also called *communes.* As in most censuses the communal population only is given for such districts, this population is often somewhat larger than that of the town or village proper. The so-called *labor communes* of Soviet Russia, as the German Volga Commune, are large districts governed on the Soviet plan and are in no way comparable with the communes described above.

County. The county is one of the oldest territorial divisions in Great Britain and Ireland, and hence in the United States and in various British colonies (see COUNTY, in the *Dict.*, esp. defs. 3, 4, and 5). In England and Wales there are now 62 administrative counties (see def. 3 in the *Dict.*, and cf. BOROUGH, above), as distinguished from the 52 older counties, often called the *ancient,* or *geographical, counties.* In Australia the use of the *county* as a census area has been discontinued. In the older, eastern provinces of Canada, the *county* remains as a local subdivision, but the *electoral district,* the subdivision on which is based the representation in the Dominion House of Commons, is the unit used in the census. In most cases, though not always, the electoral district corresponds to the county of the same name. The western provinces, as Manitoba, Saskatchewan, etc., are not divided into counties, but into municipalities, the powers of which are similar to those of counties. Subdivisions of other countries that correspond to the counties of England and America are also designated as *counties* in the Gazetteer, as the *amter* of Denmark and the *fylker* of Norway.

District. The counties of England and Wales, except London, are subdivided into "county districts," *urban* or *rural* as the case may be. The term *urban district* technically includes the municipal boroughs but is commonly specifically used to designate a small area more or less densely populated, a town, or even a small city, that does not yet enjoy all the powers of self-government belonging to a borough. The *district* of England and Wales may be likened to the *commune* of Continental countries, excepting that the *rural district* is further subdivided into *parishes,* which have certain very limited powers.

Mandate. The creation by the Covenant of the League of Nations of the mandate, or commission to establish a government over a conquered territory inhabited by a "backward" race, is one of the interesting developments following the World War. Where any territory has thus been mandated to another nation by the League this fact is noted in the Gazetteer, as under *Bismarck Archipelago, Samoa Islands, Tanganyika Territory,* etc.

Municipality. This designation is used in certain countries of a town, city, or other district having powers of local self-government, as in parts of Canada, the Philippine Islands, Brazil (Pg. *municipio*), Colombia (Sp. *municipio*), Porto Rico, Cuba, etc. The municipality often includes a large extent of country, as in Canada (see under COUNTY, above) and in Brazil. In some countries, as Brazil, the census returns give populations for municipalities only and not for cities and towns proper.

Prefecture. The chief local-government area of Japan (except Hokkaido, Korea, Japanese Sakhalin, and Formosa) is now the *prefecture,* which may be compared to the *province* in some other countries. The old provinces of Japan, which still appear on many maps, are also given in the Gazetteer, as of considerable historic and geographic interest.

Urban district. See under DISTRICT, above.
